

# ***Odor-Klenz®* Odor & Pest Treatment**

To be truly successful, odor and pest remediation must be thorough, fast acting and cost effective. ***Odor-Klenz®*** is! The significant benefits of ***Odor-Klenz®*** can be briefly summarized as follows:

- ✓ ***Odor-Klenz®* is biologically active**, based on proprietary macro organisms. Unlike odor mask based products, ***Agua-Klenz®*** uses organisms that are relatively large (macro), aggressive and ***dominant***; meaning our treatment process will eliminate all the causes of odors that are present.
- ✓ **Pests are eliminated Two Ways**: 1) no odor; no pests like flies and 2) the pests' larvae in the source material are quickly consumed by our organisms, eliminating the next generations. This larvae consumption benefit also works with most all such larvae producing pests, including fire ants. Normally, ***Odor-Klenz®*** is applied as a mist. However, it can also be applied in water and poured down into nests, as in the case of fire ants and similar pests.
- ✓ ***Odor-Klenz®* meets or exceeds all US EPA standards\*** and **quickly eliminates all odors and pests**. Detectable odors are gone within minutes of initial application, and odors and pests stay gone with maintenance treatments.
- ✓ ***Odor-Klenz®* breaks down all odor causing molecules**. Because odors are sensed only when gaseous molecules dissolve, all odor-causing materials must produce vapors. Eliminate or break the molecule and there is no odor carrying vapor produced.
- ✓ ***Odor-Klenz®* rapidly and substantially reduces BOD and COD**, and also effectively eliminates undesired bacteria and pathogens.
- ✓ ***Odor-Klenz®* is non-toxic and completely safe**. See our MSDS on our Products page.
- ✓ ***Odor-Klenz®* can be used for stationary and moving sources**, and is equally effective.
- ✓ ***Odor-Klenz®* is easy to use**. Use requires no special training, can be applied manually or automatically, by individual dose or continuous spray bar.
- ✓ ***Odor-Klenz®* is very cost effective**. Typically, ***Agua-Klenz®*** costs less than alternative processes, while providing greater benefits. The bottom line is ***Agua-Klenz®*** provides the most complete water remediation available by any process at a very competitive cost.

**Only *Odor-Klenz®* offers such thorough, *fast* and cost effective odor & pest remediation!**

## Processing Examples:

Odor and pests, especially flies, are a very big problem for chicken farms. The photo shows ***Odor-Klenz®*** being applied by a sprayer passing under cages in a large enclosed building. Development had moved closer to the farm over the years creating numerous complaints that had threatened to force the ranch to close or move. Odors were eliminated to barely detectable levels inside the building and non-detectable outside. Flies were almost completely gone in about 8 days. As a result, complaints from area residents stopped, even when the farm resumed drying the manure outside for eventual sale.

Solid wastes like garbage and manures cause a large amount of foul odors and very quickly become breeding grounds for pests. Small piles and large windrows can be easily treated to remove these problems by simply spraying a solution of ***Odor-Klenz®*** mixed in water, small piles by hand sprayer and windrows by water truck side sprays. A single treatment can last up to 3 days (depending on the weather) or until the material is turned.
